

TEXTURING TOOL INSTRUCTIONS

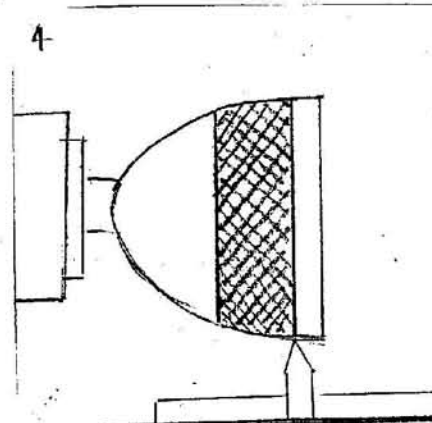

1. Adjust the tool rest so the centre line of the cutter matches the centre line of the wood being turned.

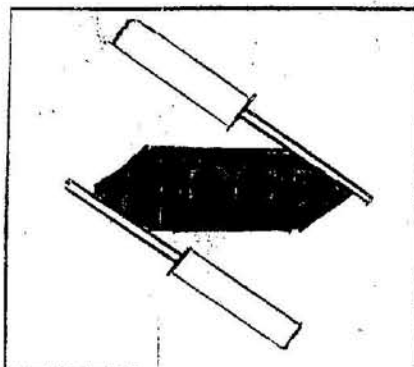

2. Presenting the tool vertical to the wood will create a beautiful pattern of small dots, then move the tool from left to right to cover the area you wish to decorate.

3. Presenting the tool at an angle will create small diagonal grooves. The method of changing the pattern of diagonal grooves can be achieved by presenting the tool at different angles.

4. Use a Parting Tool to define the edges of the area you have textured

SHARPENING

To sharpen the Texturing Wheel, use a Diamond or Oil Stone on the bevelled faces.
